

Greenhouse

250x600cm

Installation manual

EN

We are grateful that you have decided to purchase Greenhouse. We believe that it will help you in growing your flowers and vegetables and that you will be satisfied a lot. We did our best so that the design and modern technical solutions are helpful in the cultivation and so that the assembly is simple and easy.

max 60km/h

WARNING!

In strong windy weather, it is necessary to close all the door and window openings and secure them so that the wind cannot open them. During gusty winds, thunderstorms, hailstorms, rains and other adverse atmospheric conditions, it is forbidden to stay in the greenhouse. During high insolation, high temperatures may be reached; therefore, all the works in the hotbeds must be carried out early in the morning or in the evening with the doors opened on both sides of the greenhouse. It is forbidden to close oneself inside the structure.

The greenhouse is not a toy; therefore, children may stay there only when attended by adults.

max 30kg/m²

CAUTION!

In winter, it is necessary to pay particular attention to the structure so that wet and heavy snow is not deposited on it – it may damage the greenhouse. If it is not possible to control the level of snow, it is required to dismantle the cover of the side walls, front and roof for the winter period. The structure may be left for the winter period.

It is forbidden to enter the greenhouse from which snow is not removed – snow deposits may deform the structure and lead to the collapse of the roof or door, and prevent exiting the hotbed. Greenhouse roof must be desnowed regularly. If the greenhouse is not used in winter, it is necessary to secure the door in order to prevent the access of unauthorised personnel and children.

Safe use rules:

1. The greenhouse is dedicated only to plant growing.
2. Mount the greenhouse to the foundation with the indicated mounting holders included in the set.
3. Mount the structure in the place not exposed to strong wind blows; avoid slopes and open spaces. Greenhouse wind resistance: 60 km/h.
4. Do not assemble the greenhouse in strong winds and in other adverse weather conditions.
5. Keep children away from the assembly site because the set includes small elements and foil bags which may lead to choking or suffocating.
6. Check the stability of the greenhouse regularly, especially after storm winds or heavy snowfalls. If you notice any damage, replace a damaged element or disassemble the structure.
7. Check the condition of the structure regularly, in particular, the condition of the bottom anchor mounting. If there are any corrosion signs or damage, it is necessary to replace them or dismantle the greenhouse.
8. Use assembly tools specified in the manual and wear protective gloves and glasses during the greenhouse assembly and maintenance.
9. Avoid using mowers and mechanical scythes near the structure.
10. Do not keep hot objects, especially hot barbecue equipment, etc. in the greenhouse.
11. Remove snow, branches and leaves regularly from the greenhouse roof in order to prevent its damage, what in consequence may be dangerous to greenhouse users.
Max. greenhouse roof load: 30 kg/m².
12. Do not climb the structure roof.
13. Do not leave children unattended in the greenhouse because the door may close and prevent children from exiting the structure.
14. Do not use open flame in or near the structure.
15. Do not load roof panels additionally (with the exception of tied-up plants).
16. The greenhouse cannot be used in the public space.

Follow the OHS Rules

Wear protective gloves during the assembly

Wear protective glasses during the assembly

Provide help from the assistant during the assembly

The temperature in the greenhouse is high

Perform assembly on days which are not windy

It is prohibited to have the structure assembled by drunk and intoxicated personnel

EN Ground

THE STRUCTURE MUST BE FASTENED TO THE GROUND PERMANENTLY. OTHERWISE, IT WILL BE CAUGHT BY THE WIND AND IT MAY CAUSE INJURIES!

GROUND TYPE:

Concrete blocks

The blocks should be dug completely into the ground and laid on a cement mortar (connected with each other) to form a dense solid with the length and width provided in the drawing. Fill the joints with the cement mortar.

Concrete rims

Concrete rims should be dug into the ground completely and settled on the cement mortar to form a firm block with the length and width specified in the drawing.

Concrete foundation

Location

Do not assemble the greenhouse on open spaces, on slopes and in locations particularly exposed to wind blows – this will extend the service life of the hotbed significantly and make the use of polycarbonate greenhouse satisfactory for a longer period of time.

The correct mounting of the greenhouse to the ground will protect the product against being caught by the wind.

Manufacturer is not held responsible for:

- the incorrect use of the greenhouse and destruction as a result of extreme weather conditions (hailstorm, storm winds, snow). The ground must be even and levelled.
- damage due to the greenhouse being caught by the wind (it applies to product damage and damage caused by the greenhouse).

The user is responsible for the reliable assembly of the product and its secure fastening to the ground.
